Network Slicing

Context and innovation pilots

Relevant 5G Milestones

¿What is Network Slicing?

Slice 1: optimizada para alto ancho banda

Slice 2: optimizada para baja latencia

Slice 3: optimizada para IoT

Slice 4: optimized for connected vehicle

When it makes sense...

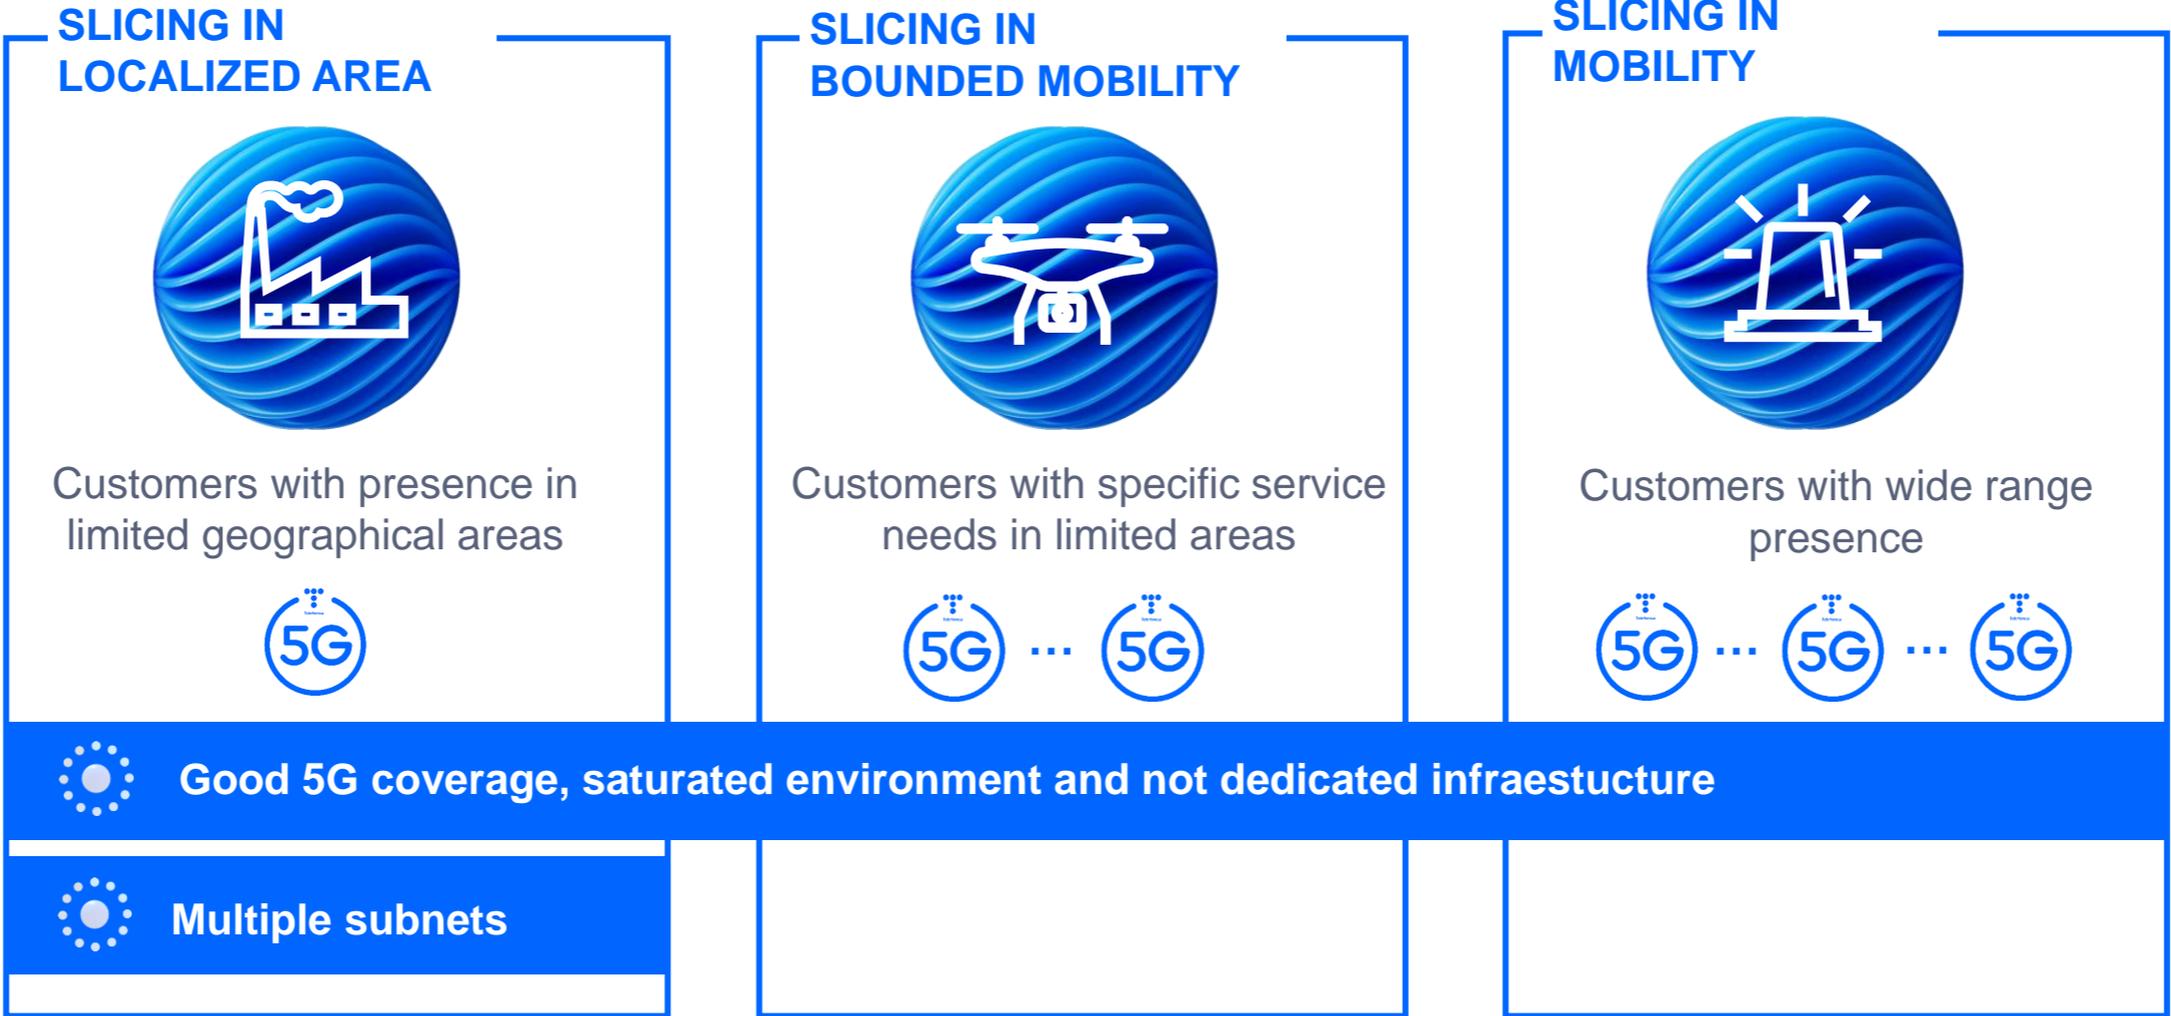

Good 5G coverage, saturated environment and not dedicated infrastructure.

If multiple subnets are needed for services that require different capabilities.

Innovation Pilots

Slicing in localized area

Objective

Deploy a virtual **private network over 5G SA** entirely based on slicing to securely and reliably transmit port mobile crane traffic.

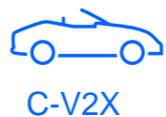

Goal: zero accidents at the terminal.

SLICING
700MHz
(10%)

PRIVATE
DNN

Benefits

- 100% commercial 5G SA network reuse, earlier provisioning.
- Same SIM cards for private and commercial network services.
- Prioritized crane comms.

Learnings

- 700MHz as a key to cover environments with high metal density.
- With 10% RRP up to 14 cranes connected simultaneously.

Slicing in mobility

Objective

Validate the capability of 5G SA + slicing networks **in mobility and acting as complementary TETRA network to provide video emergency communications.**

SLICING
700MHz
(10%)

SLICING
3500MHz
(10%)

PRIVATE
DNN

Benefits

- No need to deploy a dedicated network.
- Same SIM cards for private and commercial network services.
- Sending multimedia files, or video calls, beyond voice and text (TETRA complementary).

Learnings

- On 700 MHz with 10% RRP 31 HD videocalls.
- 3500 MHz band suitable for supporting multiple HD video sessions.

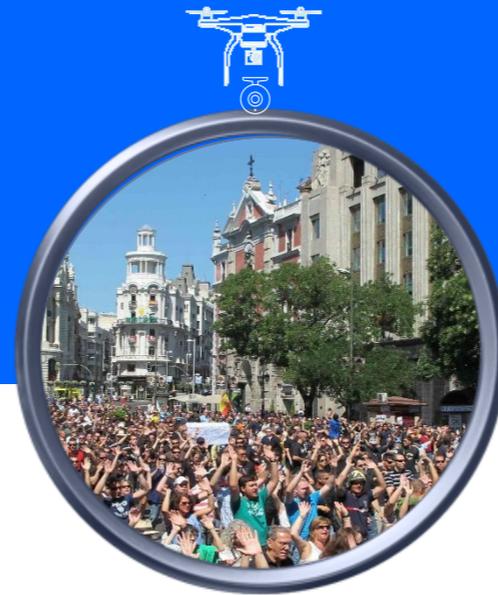

MWC 2024

Slicing in bounded mobility

Network slicing for video transmission in congested environments

DRONES FOR SECURITY

The images are only seen by the drone pilot through the controller

With 5G and Network Slicing the video can be viewed from the control center

(Tecnoalcalá)

Video Management System
(VMS)
Control center

Slicing in bounded mobility

Objective

Deploy dedicated network resources, based on slicing, for the **delivery of high quality video captured by a drone** to monitor security at mass events (control center).

SLICING
3500MHz
(30%)

PRIVATE
DNN

Benefits

- No need to deploy a dedicated network.
- A single SIM from a single operator offers the same capacity as 8 SIMs from different operators.

Learnings

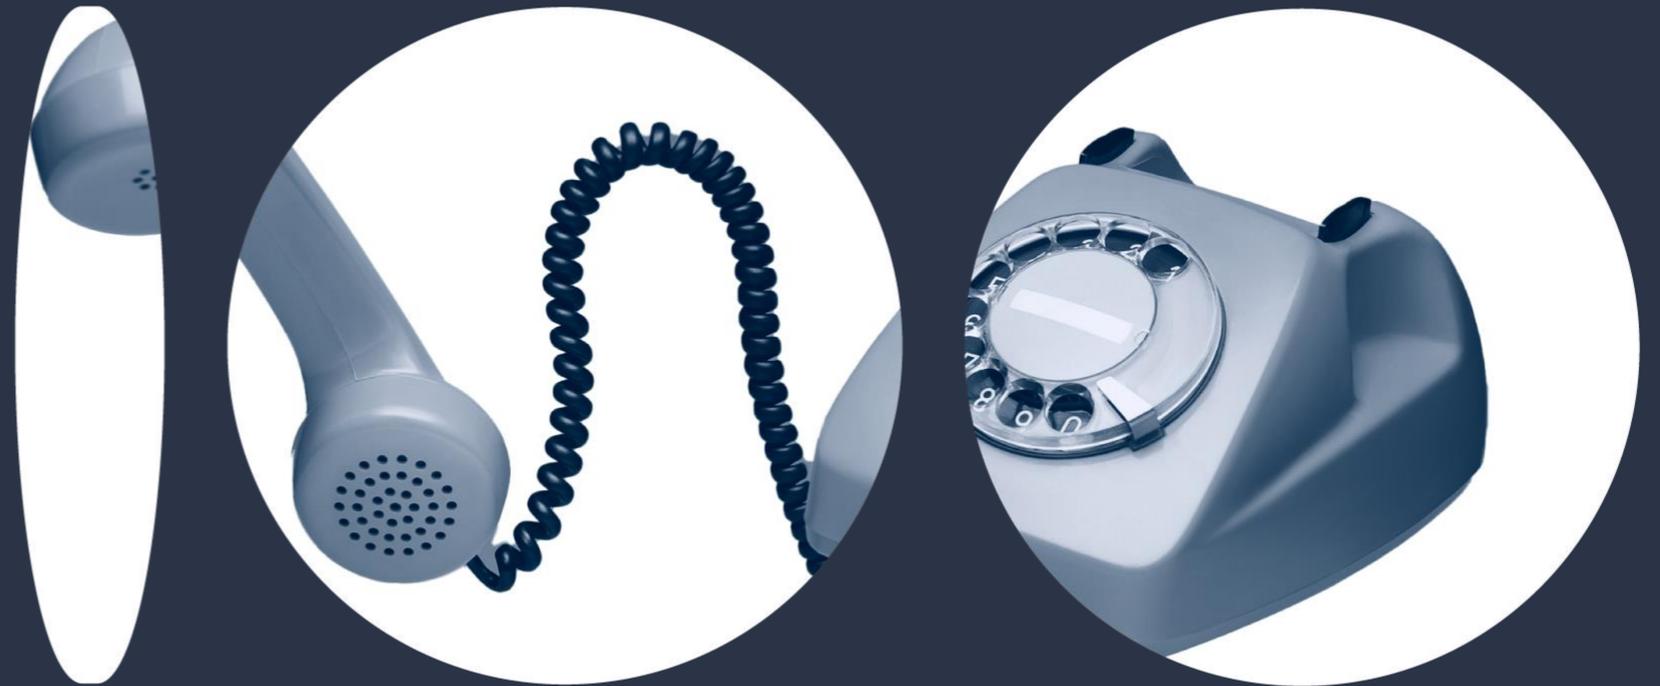

- For video transmission, an RRP of 30% is required in the 3500MHz band.
- Proven effectiveness of slicing, offering reserved resources for video delivery in situations of network congestion.

“Network Slicing, a commercial reality in 2024”

Tactical 5G Bubbles

Fast and Secure connectivity with 5G Bubbles

5G bubbles, a disruptive technology for Security and Defense

“A totally differential leap to **Communications Technologies**”

Low Latency

High Bandwidth

Multiple users at the same time

“This allows us to have an **advantage in**”

Change operation mode

Carry out operations 24/7

Robotize human activities

Perform night operations

Stand alone, ultra-low latency environments

“This **5G bubble private network** capacity allows us to complement the network, in those places **without coverage** or **in crowds**”

Areas without Network Coverage

Areas with Network Congestion

“This allows us to **provide**”

Bandwidth

Quality of service

Operations robotization

We adapt to deployment environments

“We manage to **deploy** our **technology** in different situations”

5G for Fixed Environments

5G in high-capacity Fixed Deployable Environments

5G Vehicular on the move

5G Naval on the move

5G NTN

MWC 2024

Our Tactical 5G solution

“**Transversal** technology with a capacity that will run on all **infrastructure axes**”

Secure Coms.

Robotics

Artificial Intelligence

Sensors

Command & Control

“**5G** solution with the **capabilities** that are being **developed**”

Cyberdefense

Cyberspace

National Security Agencies

Robotics and augmented reality in critical situations

We have the ability to integrate all types of robots

“The integration of **AI** in **robotics**, the “*killer application*” in **5G Coms**”

Aerial robots

Ground Robots

Maritime robots

Underwater robots

“**Sustainable** solutions with the **environment**”

Consumption reduction

Reduction of monetary costs

Reduce response times

Possibility of operating 24/7

The democratization of airspace with drones

“Receive and analyze information in real time for decision making”

Security

Safeguard the security of state security forces and thanks to the use of robots and drones

Information

The processing of information with AI means that we can decide operations faster

Control Centers

Possibility of operating all this in a remote and virtual Command & Control Center allows us to be more efficient in all scenarios

One robot, different uses

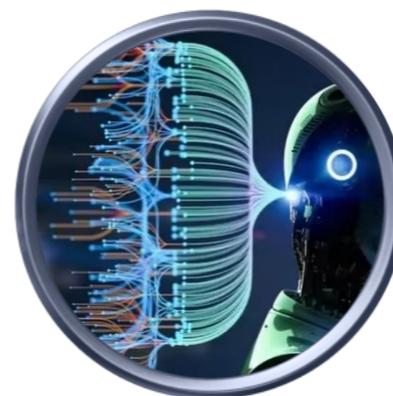

“The **sensorization** of robots allows us multiple uses without giving up safety”

Hardware

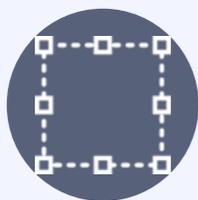

Sensors

Artificial Intelligence

“**Unlimited** capacities, thanks to **sensors + AI**”

Safety & Security

Surveillance & Patrol

Search & Rescue

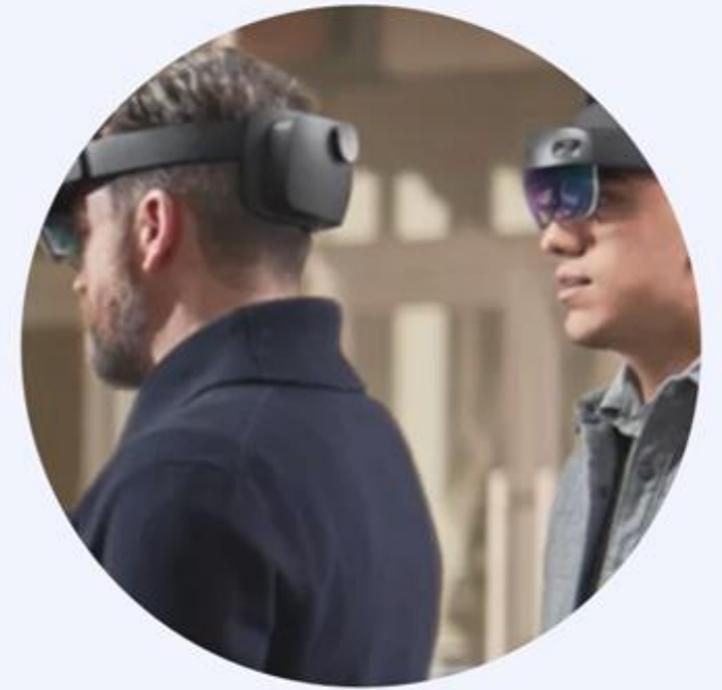

Logistics

A metaverse for emergencies?

Really?

MWC 2024

Deployable distributed command post

“We are a key **support** for decision-makers in **complex scenarios**”

We simplify complexity by presenting crucial information visually and accessibly. With generative AI, we learn and maximize available options, ensuring clarity and confidence in every decision.

MWC 2024

Products

“We are a key **support** for decision-makers in **complex scenarios**”

Strategic Environment XRF **Colossus**

Multitouch tables and tablets.

Designed to enhance real-time control and supervision at a strategic level.

Operational Environment XRF **Sandbox**

Mixed reality and distributed advanced command posts.

Consolidates data from multiple sources into a single interface, providing a 'multi-source' and 'multi-user' experience at operational and/or strategic levels.

Tactical Environment XRF **Field Companion**

Mobile devices.

Mobile application (online/offline) through which deployed brigades and units communicate and receive real-time tracking information. It enables command centers to monitor the movement of assets and resources in the operational theater.

MWC 2024

Generative AI

- **Interface for emergency procedures.** We developed a voice-command tool that actually talk to you and answer any question you may have about any specific manual or procedure, going directly to the point. It applies generative artificial intelligence algorithms (on-premises) to process large datasets, documents, and multimedia resources, summarize them, and present them in the command center interface in audio and/or text format, in multiple languages.
- **Meeting translations.** Half-duplex voice service to translate virtual meeting conversations.
- **AI-driven decisions support.** It interprets complex scenarios and suggest action recommendations based on pre-trained doctrines. It is capable of containing simulation models for emergency management training scenarios such as floods, maritime spills, lava eruptions, forest fires, and specific emergencies like chemical explosions and gas clouds.
